Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 11 and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Skinner et al (4,128,600). Skinner et al disclose interpenetrating dual cure resins comprising a polyacrylate having hydroxy functional groups, a polyisocyanate and a photoinitiator that forms a urethane linked copolymer. See the Examples, for example Example II wherein the composition comprises a photoinitiator and cure is by UV and thermal means.

Claim Rejections - 35 USC § 103

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1, 2, 11 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Karim et al (5,721,289). Karim et al discloses products obtained by crosslinking compositions comprising a polyacrylate and a cationically polymerizable monomer, such as a diepoxide, in the presence of a photoinitiator. See column 5, lines 49-53, column 6, lines 7-63, column 7, lines 4-10, column 15, lines 19-35, and Examples 8-9. (Meth)acrylate monomers having pendent hydroxyl groups are disclosed as Class C in column 6. It would have been obvious to one skilled in the art at the time of the invention to employ Class C monomers to prepare the polyacrylate, as taught by Karim et al in column 6, because Karim et al teach using (meth)acrylate monomers containing hydroxyl groups. Thus, It would have been obvious to

Application/Control Number: 09/778,165

Art Unit: 1711

one skilled in the art at the time of the invention to employ a polyacrylate having hydroxyl groups in the compositions disclosed by Karim et al. One of ordinary skill in the art at the time of the invention would have been motivated by a reasonable expectation of success since Karim et al teach this embodiment of the disclosed compositions.

Allowable Subject Matter

Claims 3-8 would be allowable if rewritten to include all of the limitations of the base claim and any intervening claims. The prior art cited herein and otherwise known to the examiner does not disclose or suggest polyacrylate copolymer obtained from 1-20 % by weight (meth0acryalte monomers containing tert-butoxycarbonyl groups in combination with a polymerization regulating photoinitiator and 0.1 to 5 % by weight of a difunctional isocyanate and/or a bifunctional epoxide.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
